“How ! To Pick LOCKS!”

! Here are the three best body weight exercises

Pick A to do. Simply do them and you'll get bigger biceps in no time at all.

Lock in 5 The first most well known free weight exercise

for biceps is of course a “chin up” which most of you

seconds

(Before we start, you really only need two things #1

or Less You and #2
Pull-Up Bar and with
those two you'll

get insane re-
sults following this system) And thats

Guaranteed!

© 2013 BAMF

! First things first. This is for informational purposes only. The only house you (should) be picking is your house ;-). If you do get caught picking a house trou-

ble

will find you Unless you can run very fast. I personally don't recommend you DO

THAT sort of thing because its against the law. If you were going to pick a lock (yours of-course) theres three very simple and effective methods you can use depending on the security you currently have.

! HERE'S a BONUS: I also included some bonus material like **how to Mac**

Giver yourself out of police cuffs, how to

drill any lock open, or even how to break

in locks using only a pepsi can. Just my way of saying thank you for buying this book.

! First method I am going to go into is Picking. The first time I tried picking I did

it on a deadbolt and I got the deadbolt open

in seconds. The second time it took about 20 minutes lol. After doing it for about a week I could easily get any deadbolt on my house open in about 7 - 12 seconds. All

it takes is practice and knowing the fundamentals to picking.

! I personally recommend buying your self a pair of picks rather than trying to use bobby pens like in the movies. Get

the right tool for the job and it will go much smoother.

when you buy your set you'll get a basic set of two items, torque wrenches and pickers.

! Here's a Tension wrench, its main purpose is to keep enough pressure on the pins to hold them in place after you scrap across them. without the tension wrench you will NOT be able to pick.

How To Use Tension wrench:

1. Below is a torque wrench inserted into a door lock. You will insert teh torque wrench in at a 90 degree angle.

2. You will slowly press the torque wrench down or pull up. You should feel the lock give or not give. You want to turn the wrench in the direction that the lock gives to.

3. Now you will keep that pressure and continue to press that pressure without ever giving back. If you do give back you will have to start all over when you start to pick

! Setting a pin is the act of lifting a pin

stack to the shear line (correct height) in a way that causes it to stay there. Once a pin is set, we can move on the next.

When we set all of the pins in the lock, it will open. The way to make the pins stay

set after correct lifting is to apply **tension**. Tension is the lock-picking term for

putting rotational pressure on the plug.

! After the wrench has taken all the pressure it can take you will enter your pick and start to stick the pick all the way down the key hole and sweep back

3

times while keeping the pressure down.

The reason why I sweep back 3 times is sometimes you'll get lucky and get 3 or 5

of the pins by sweeping back and forth.

! The trick is to understand that you can only set the pin that is binding at that time. You can't just choose any pin and lift it under tension to make it *click*.

Once you set a pin, another will bind. Continue this same process until the lock is

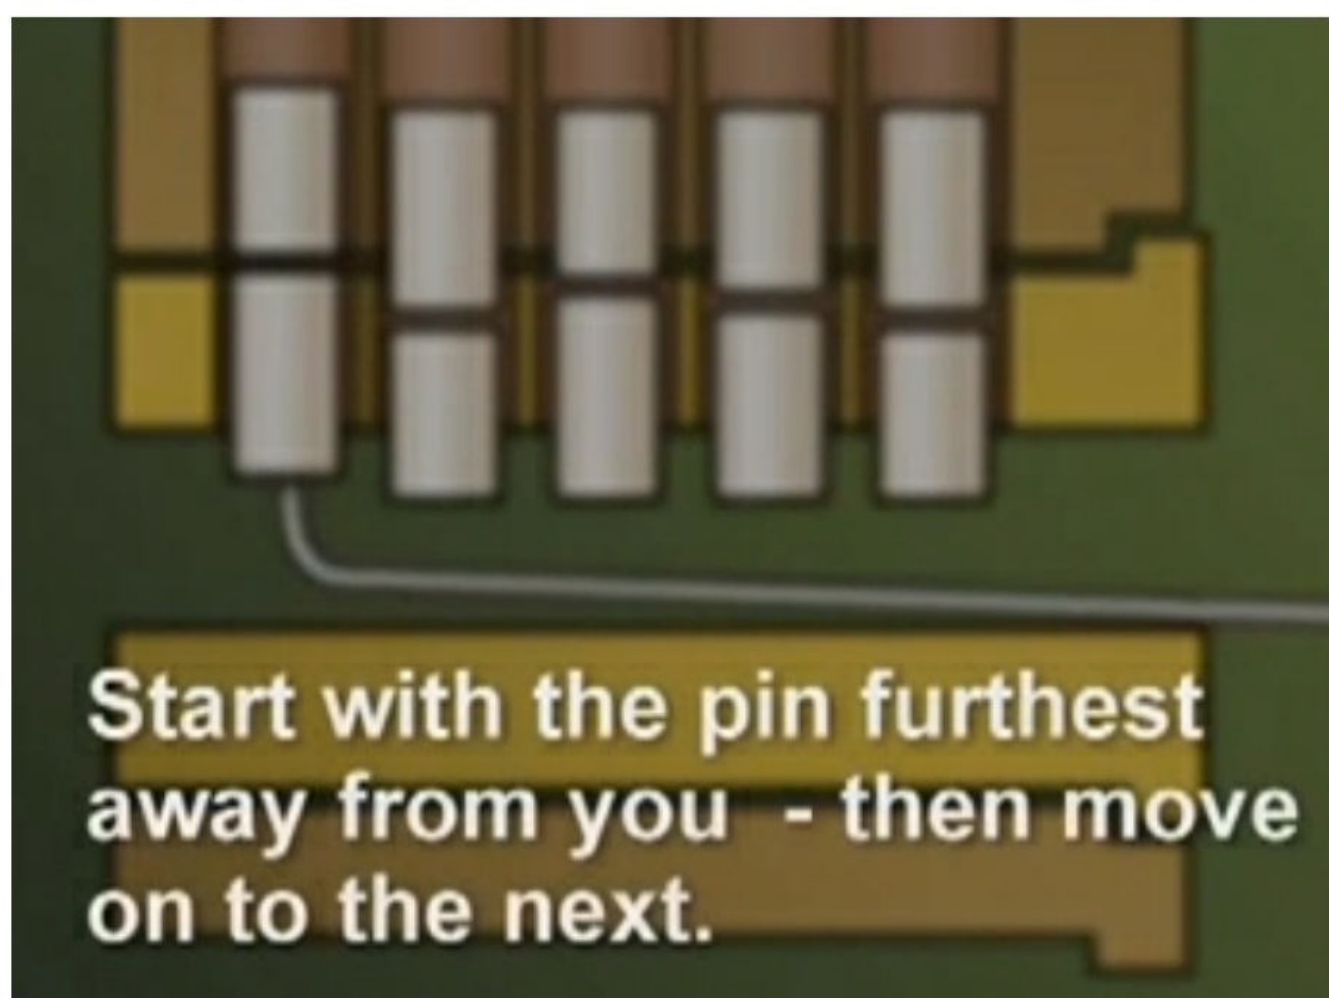

completely picked. The sequence in

which the pins bind (and hence must be set) is called the **binding order** and is unique to each lock.

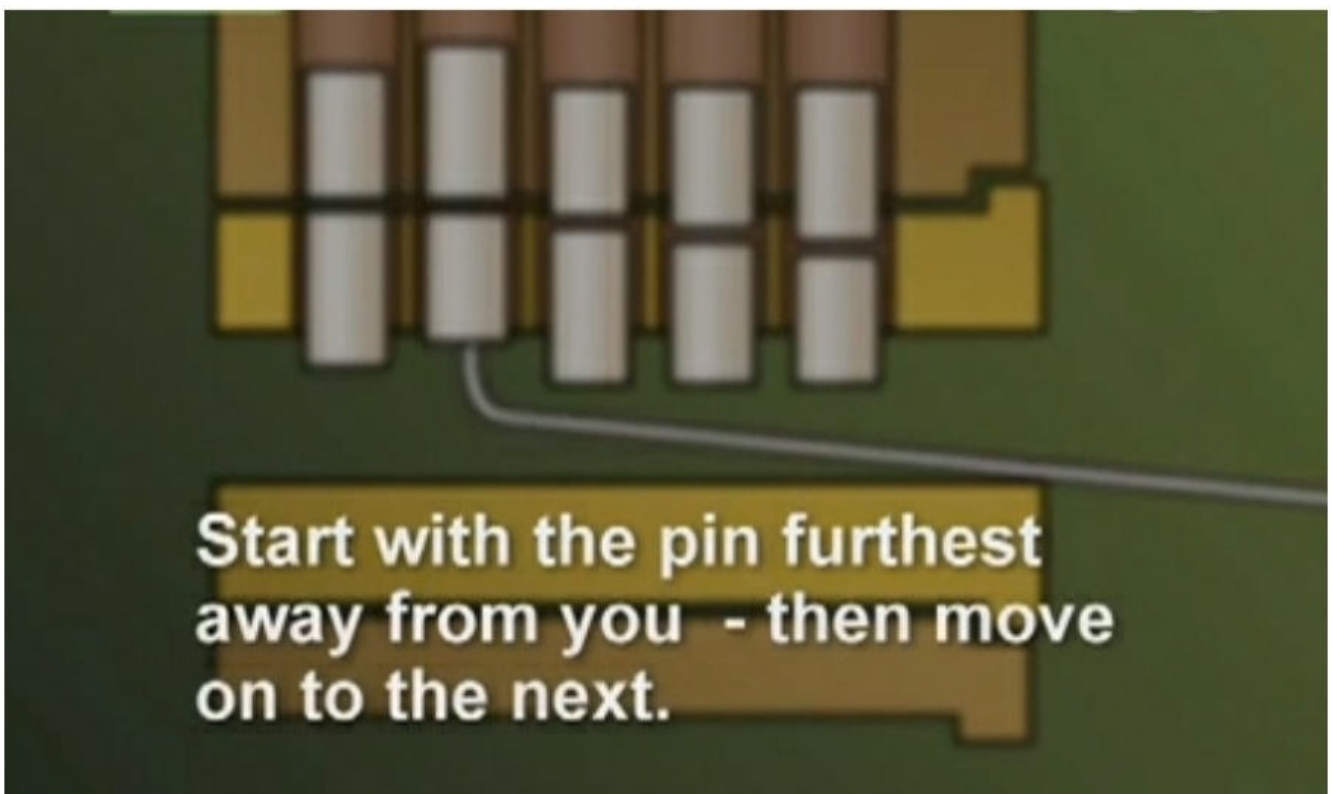

the act of individually lifting pins up in order to "set" them. Getting comfortable holding the pick is the first step in being able to feel your way around the inside of a lock. The most common "proper" way to do this is like a pencil with your index (or middle in my case) finger resting on

the top of the pick's shaft.

!

Inside View of Picking.

I actually try to visualize the pins I am doing when picking a lock. Kind of like

trying to find the light switch when its pitch dark. As soon as you get a baring

in the room you can easily get an idea of where the light should be. Some

people are better at picking than others because they are what you call **KINESTHETIC**. Kinesthetic learning (also known as **tactile learning**) is a learning style in which learning takes place by the student carrying out a physical activity, rather than listening to a lecture or watching a demonstration. People with a preference for kinesthetic learning are also commonly known as "do-ers". Tactile-kinesthetic learners make up about five percent of the population. If your not kinesthetic.. Don't worry it just takes practice. 10 hours of practice and you should be a pro.

Starting from the back of the lock and pulling outward while keeping a loose grip

on the pick will allow its tip to ride over the pin tips. Try counting them without

lifting anything; then try moving from pin to pin while keeping track of which one

you're on. By practicing this sort of thing enough, you'll eventually be able to just choose a pin and know exactly how far into the lock it is.

Opening a Door With a Credit Card

Opening Doors with a credit card can be easy. You Need to things a Jam cannot be in the way and it can not have a dead bolt. If you have a Jam or dead bolt use bump key or a pick.

Here is a dead bolt and credit card, it WONT work.

Heres a credit card and regular lock that 99% of house holds have (this will work)!

! Easy pickings... no Door Jam just slide the credit card in and pull the door open. (this is actually the first way I learned to break in doors. (of course its was

my own doors as I would never do anything illegal) I used a card I didn't care about so I naturally used a Block Busters Video Card.

PICKING A CARD

Defiantly want to make sure the card is laminated of some type. Soft cards will break and might only be good for one use. If you get yourself a good laminated

card it can be used over and over again. The card shouldn't be to hard as it wont be

flexible enough to bend around the hard to get locks. Credit card with door

jam. Still possible to break in just must have the right card. The card must be flexible to bend around two 90 degree corners. If your using a credit card it will break. I recommend Block buster Cards. There free and flexible.

One of my favorite ways to break in is The Bump Key

! Its one of my favorites because I can literally teach a child to do it in 5 seconds or less on how to get into 95% of all houses and dead bolts. All you do with a bump key is insert one of 4 bump keys into a lock and literally Bump it or

“hit it” and it will jar all the pins up and then you time the pins jumping and turn the key. Wala your in.

! You can make your own bump key, I do recommend buying a mechanically tuned one though as there will be no

human error in the filing. A bump key basically has every pit of the key filed down to the lowest point. You can see in the pic below.

! I don't recommend filing your bump key down yourself. Sure you can do it. the probability of your filed down key working is probably about 70% of the time.

The mechanically tuned key that you can buy will work 100% of the time because there is now human error.

Your secret tool for bumping is a 1/16 rubber washer. This aligns the key for you

automatically after ever time you bump it.

You can see the photo shows a hammer to bump the key. I recommend using a hair

brush or 1 by 2 piece of wood.

! When you bump the pins up all you have to do is time the turn of the key and Wala door opens.. only takes like 5 minutes to get a hand of this. The biggest

thing is you'll need a bump key for every big brand thats being sold. Right now

there are only two big brands being sold by Walmart and Lowes.
